***Response to Amendment***

In view of the applicants' filing the terminal disclaimer filed October 23, 2005 the provisional rejection of the claims under the judicially created doctrine of obviousness-type double patenting over copending application 10/321,142 has been obviated.

However, claims 1, 6 and 14-18 are subject to a new ground of rejection under 35 USC 102(b) as being anticipated by Harris (USP 5,071,997 newly cited).

***Information Disclosure Statement***

The information disclosure statement filed November 15, 2005 has been considered and has been made of record.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6 and 14-18 are newly rejected under 35 U.S.C. 102(b) as being anticipated by Harris (USP 5,071,997 newly cited).

Harris'997 (newly cited) discloses polyimides exhibiting superior thermal, solubility, electrical and mechanical properties; the polyimides comprising substituted benzidines where said substituents are sufficient to provide said benzidine with a non-coplanar molecular orientation such as halogen, alkyl, nitro, cyano, thioalkyl, alkoxy, aryl and substituted-alkyl such as halogenated-alkyl and especially trifluoromethyl. The polyimides are solution castable, form high clarity films, have excellent thermal stability,

Art Unit: 1711

form films with extremely low dielectric constants and low coefficients of thermal expansion ideally suited for coatings in microelectronics and can be spin drawn to form fibers with excellent tensile and compressive strengths. The polyimides are also usable as reinforcing agents for molecular composites and as components in gas and/or molecular separation membranes; that anticipates the claimed invention. See col. 1, lines 10-29; col. 9, lines 11-22 and claims 1-3 and 10-15.

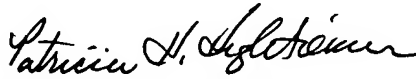

Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

Claims 2-5 and 7-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
